### Animals that Hibernate In Winter

Read the passage. Answer the questions.

Some animals hibernate in winter. These animals sleep all winter! Their body temperature drops and their hearts slow down. In the summer and fall, they eat to store fat to help them stay warm in the cold weather. When the weather begins to get colder, they find a safe place under leaves or rocks, trees, underground, in ponds, or caves to curl up and sleep until the end of winter.
